

## The KLA Schools Approach to:

# STEAM

## The Nido Class

STEAM is embedded in all the experiences that children encounter at KLA Schools. Each experience brings infinite possibilities for the children to discover and learn about the world around them. Children are encouraged to research, build connections and learn about new concepts.

One to two year-old children learn best through sensory experiences that allow them to safely explore the world around them.

**S**cience is all around Nido children as they explore the outdoors using their senses, watch the weather, listen to the sounds around them and collect leaves, sticks, and plants.

**T**echnology means using projectors to interact with light and explore the concept of motion.

**E**ngineering skills are developed as children build a foundation for a block tower and learn to balance their creations.

**A**rt is present in all our toddlers do, and is one of the many languages that they use to communicate their thoughts and feelings about the world.

**M**ath concepts are introduced as they make compositions and patterns on the light tables or sort translucent gems by size.
